

NewFord NFM-03 Fixed Mixer

User Manual

NewFord NFM-03 Fixed Mixer

Specifications

Height 3 U

Width 3 TE

Depth 62 mm

Power

-12V : 9 mA

+12V : 9 mA

Installation

The module requires 9 mA on both the -12V and +12V rails. Ensure your power supply module can meet these requirements.

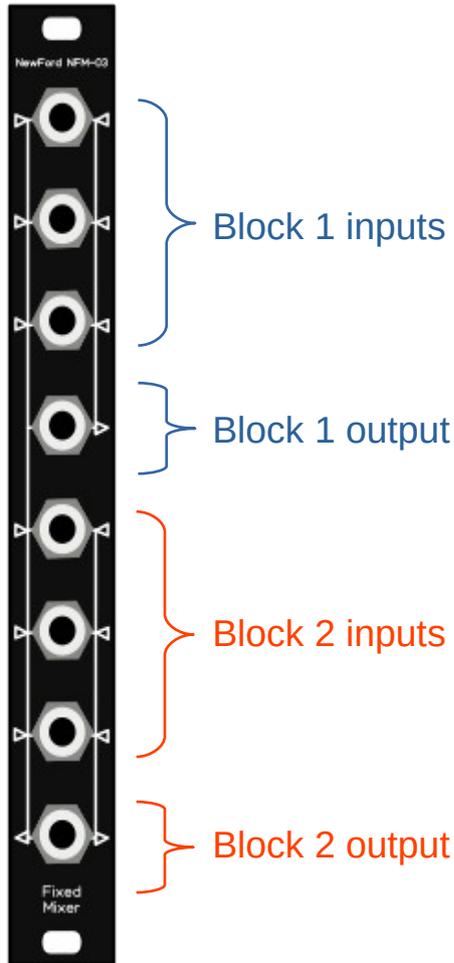

Connection is made using a cable with a 16-pin connector. A key on the NFM-02 prevents incorrect connections.

Be sure to disconnect the power in your rack before connecting to your power bus and ensure the cable is oriented correctly (the red wire on the cable should be facing -12V).

3 TEs are required to mount the NFM-02. Two screws are used to secure the module. It is recommended to use washers to avoid damaging the front panel at the mounting points.

NewFord NFM-03 Fixed Mixer

Utilization

The NFM-03 is a fixed-gain mixer module consisting of two blocks, each with three inputs routed to one output.

If no jack is inserted into the output of the first block, all inputs are mixed to the output of the second block.
